Checklist For Visual Processing Difficulties

What are the signs of visual processing difficulties?

- Child does not pay attention to visual tasks.

- Has difficulty with tasks that require copying (taking notes from a board)

- Reverses or misreads letters, numbers and words

- Has difficulty writing within lines or margins

- Has trouble spelling familiar words with irregular spelling patterns.

- Skips words or entire lines when reading or reads the same sentence over.

- Poor visual perceptual skills like reversals of letters/numbers, poor tracking, building puzzles, etc

- Has weak mathematical skills; frequently ignores function signs, omits steps, and confuses visually similar formulas like + (plus) and x (multiply)

- Routinely fails to observe or recognise changes in notice board displays, signs or posted notices.
